What is Vis?

“Computer-based visualization systems provide visual representations of datasets designed to help people carry out **tasks** more effectively.”

Visualization is suitable when there is a need to augment human capabilities rather than replace people with computational **decision-making** methods.”

Munzner, 2014

images about numbers

augmenting human capabilities

70%

"The visual system provides a very high bandwidth channel to our brains." Munzner, 2014

Colin Ware on Visual Perception

“The visual system has its own rules, We can easily see patterns presented in certain ways, but if they are presented in other ways, they become invisible...When data is presented in certain ways, the patterns can be readily perceived. If we can understand how perception works, our knowledge can be translated into rules for displaying information. Following perception-based rules, we can present our data in such a way that the important and informative patterns stand out. If we disobey the rules, our data will be incomprehensible or misleading.”

How many nines are there?

7	4	7	7	5	5	2	7	4	7	1	7

Anscombe's Quartet

Can you describe these four datasets (x,y)?

I	
x	y
10.0	8.04
8.0	6.95
13.0	7.58
9.0	8.81
11.0	8.33
14.0	9.96
6.0	7.24
4.0	4.26
12.0	10.84
7.0	4.82
5.0	5.68

II	
x	y
10.0	9.14
8.0	8.14
13.0	8.74
9.0	8.77
11.0	9.26
14.0	8.10
6.0	6.13
4.0	3.10
12.0	9.13
7.0	7.26
5.0	4.74

III	
x	y
10.0	7.46
8.0	6.77
13.0	12.74
9.0	7.11
11.0	7.81
14.0	8.84
6.0	6.08
4.0	5.39
12.0	8.15
7.0	6.42
5.0	5.73

IV	
x	y
8.0	6.58
8.0	5.76
8.0	7.71
8.0	8.84
8.0	8.47
8.0	7.04
8.0	5.25
19.0	12.50
8.0	5.56
8.0	7.91
8.0	6.89

Statistics to the rescue?

Property	Value
Mean of x in each case	9 (exact)
Sample variance of x in each case	11 (exact)
Mean of y in each case	7.50 (to 2 decimal places)
Sample variance of y in each case	4.122 or 4.127 (to 3 decimal places)
Correlation between x and y in each case	0.816 (to 3 decimal places)
Linear regression line in each case	$y = 3.00 + 0.500x$ (to 2 and 3 decimal places, respectively)

How about visualizing them?

Francis Anscombe

Interactive

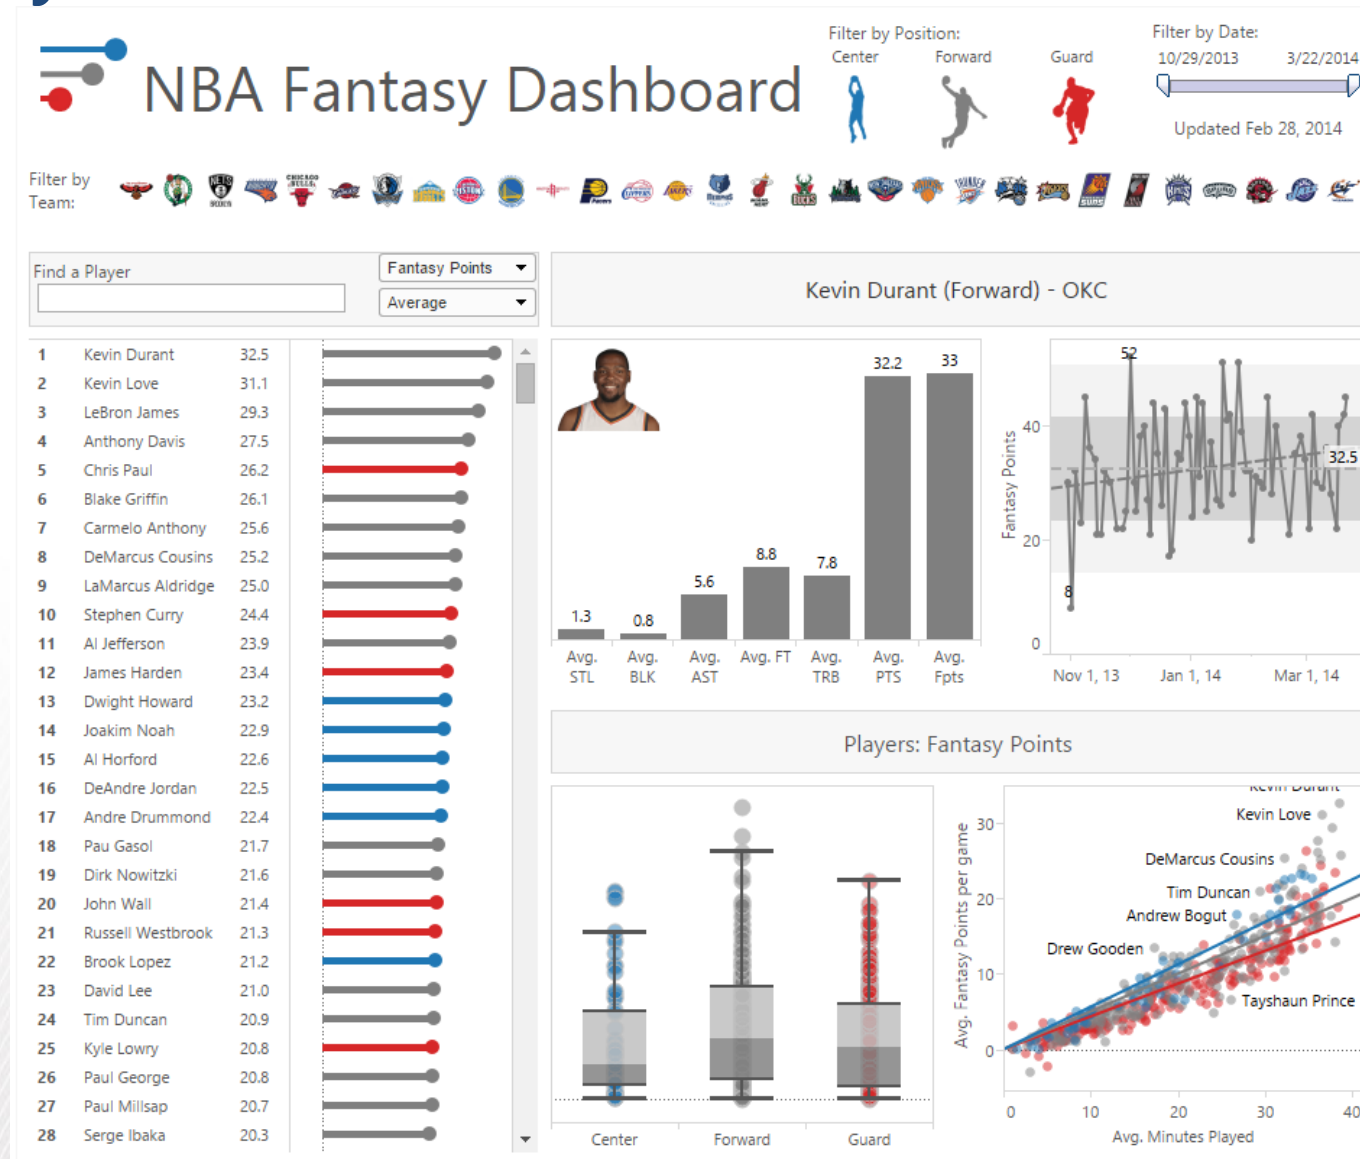

Why Peyton Manning's Record Will Be Hard to Beat

By GREGOR AISCH and KEVIN QUEALY OCT. 19, 2014

The Broncos quarterback set the all-time N.F.L. touchdown passing record — and is still going strong.

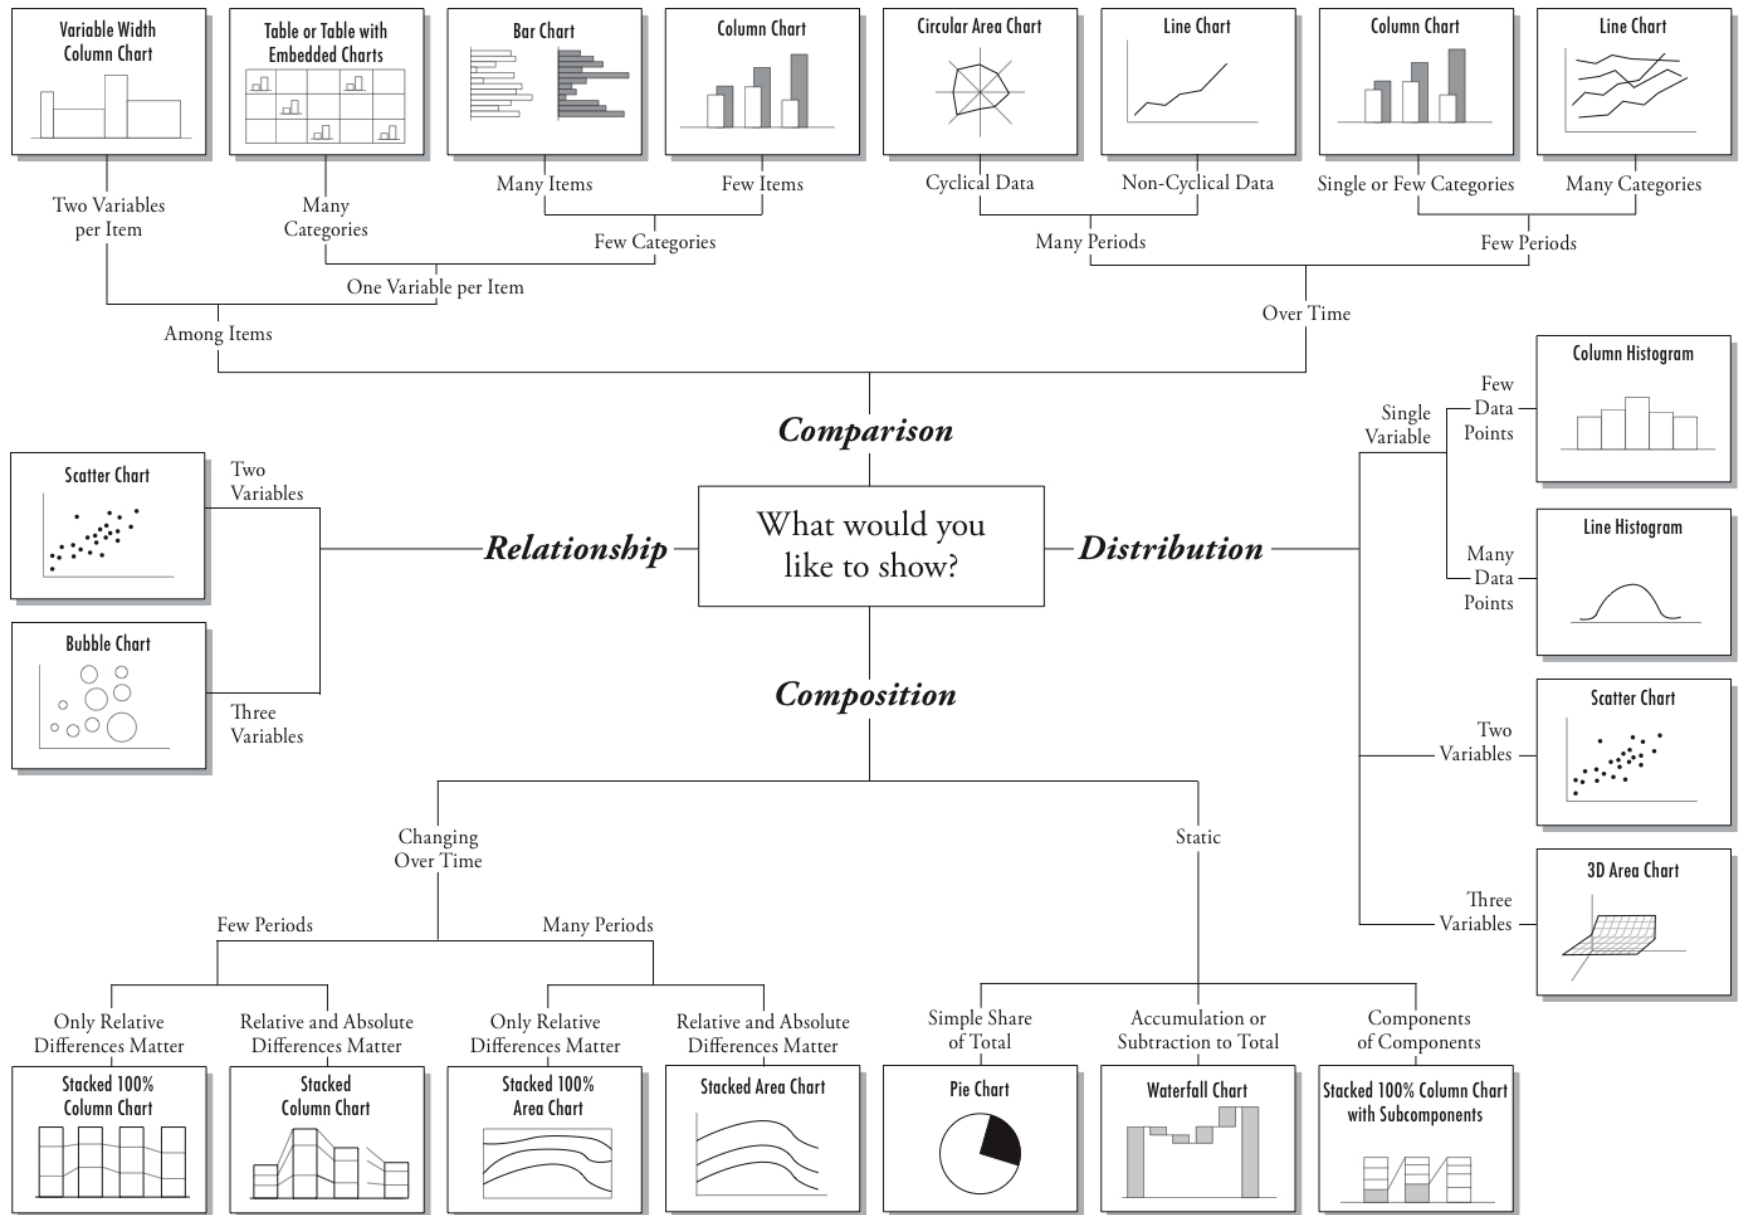

Richly Interactive

The Design Space

Chart Suggestions—A Thought-Starter

THE GRAPHIC CONTINUUM

The Graphic Continuum shows several ways that data can be illustrated individually or combined to show relationships. Use of various shapes, chart types, and colors can help identify patterns, tell stories, and reveal relationships between different sets and types of data. Bar charts, or histograms, for example, can illustrate a distribution of data over time, but they also can show categorical or geographic differences. Scatterplots can illustrate data from a single instance or for a period, but they also can be used to identify a distribution around a mean.

This set of charts does not constitute an exhaustive list, nor do the connections represent every possible pathway for linking data and ideas. Instead, the Graphic Continuum identifies some presentation methods, and it illustrates some of the connections that can bind different representations together. The six groups do not define all possibilities: Many other useful, overlapping data types and visualization techniques are possible.

This chart can guide graphic choices, but your imagination can lead the way to other effective ways to present data.

COMPARING CATEGORIES

Compare values across categories

GEOSPATIAL

Relate data to its geography

PART-TO-WHOLE

Visualizations that relate the part of a variable to its total

RELATIONSHIP

Illustrates correlations or relationships between variables

DISTRIBUTION

Graphical representations of the distribution of data

TIME

Track changes over time

Chess Positions Galore

François Labelle has calculated the number of distinct chess positions by ply, or move. The number increases dramatically with each successive move as the below line chart (with logarithmic y-axis) depicts. After just 5 moves each (or, by ply #10), the possibilities have reached staggering proportions

How to find an effective design

6 Principles of Communicating Data

1

know
your
goal

- ☐ Who? identify your target audience
- ☐ What? articulate your intended message
- ☐ Why? define the desired effect

2

use the
right
data

- ☐ Necessary: get data that supports your point
- ☐ Sufficient: enough data to draw conclusions
- ☐ Relevant: eliminate any extraneous data

3

select
suitable
visualizations¹

- ☐ Quantitative: position > length > angle > area
- ☐ Ordinal: position > gray ramp > color ramp
- ☐ Nominal: position > shape > color hue

4

design
for
aesthetics

- ☐ Clean up fonts, borders, gridlines, alignment
- ☐ Add graphic elements that aid cognition
- ☐ Ensure data is not occluded or distorted

5

choose
medium &
channel

- ☐ Medium: static, interactive, or animated?
- ☐ Channel: standalone, recorded, remote, live
- ☐ Mode: broadcast or directed?

6

check
the
results

- ☐ Reach: did you reach your target audience?
- ☐ Understanding: did they get it?
- ☐ Impact: did they react in the desired way?

Readings

Read Munzner's *Visualization Analysis & Design* ch 3-4

Read Jones's *Communicating Data with Tableau* ch 4-5

Homework Assignment #2 (Due before class on 10/27)

- Find one dataset that includes at least one quantitative and one categorical attribute (data type).
- Create a visualization that shows “how much” and “how many”
- Publish your visualization to Tableau Public, and upload the Viz URL
